## SKILLS

**Web Development** - 12 years  
**Front-end (HTML, CSS JS)** - 9 years  
**Git** - 7 years  
**Vue.js** - 6 years  
**Trello** - 5 years  
**Back-end (PHP, MySQL)** - 4 years

## LANGUAGES

**English** - Upper intermediate (B2)

## ABOUT ME

I love to learn new technologies and methodologies and implement them in my projects. As I think sharing knowledge is essential for teamwork and product building.

## AWARDS

**CX Hero (Entain)**  
April 2020

## WORK EXPERIENCE

**Front-end Developer - Contractor (Entain)**  
January 2018 - currently

As the company grew, our team grew as well (~25 members) and we had to support much more marketing teams (~20). We moved from creating ad-hoc solutions to being a product team. As a product team, we had to create a promo page based on requirements of a marketing team, but also keep in mind re-usability (automatic theming, easy localisation, easy update of content, following legal requirements in different countries), so rather than promo pages we were building mechanics ("Claw Machine"; "Rock, Paper, Scissors"; "Snow Globe", several predictors; etc.). Our most successful mechanics were used by over 100k players daily, during busy days it was over 1M of players across multiple locations such as Europe, USA and Africa and mechanics.

As the longest-serving member of our team, my unofficial role was being a technical lead as well. My responsibilities included mentoring junior developers, doing code reviews, communication with other teams, improving our internal processes, managing our internal node packages, creating new mechanics and maintaining the old ones.

## OTHER SKILLS

**SASS (SCSS)** - 5 years  
**SiteCore** - 6 years  
**Vuex** - 4 years  
**Smarty** - 3,5 years  
**Webpack** - 3 years  
**Wordpress** - 2 years  
**Email creation** - 2 years  
**jQuery** - 2 years  
**Node.js packages** - 2 years  
**Unit Testing** - 2 years  
**Bootstrap** - 2 years  
**Photoshop** - 2 years  
**AMPscript** - 2 years  
**Web Accessibility** - 1 year  
**Jira** - 2 year  
**Pinia** - 2 year  
**Bulma** - 1 year  
**UML** - 1 year  
**CI/CD** - 1 year  
**Firebase** - 1 year  
**PWA** - 1 year  
**NoSQL** - 1 year  
**shell** - 1 year  
**.NET** - 1 year

### **Front-end Developer (Entain)**

March 2015 - December 2017

Entain is an international sports betting company. I have worked in a central technical team in the marketing department. Our goal was to make life easier for marketing teams. During that time, we created a module in .NET to an existing solution for easier management of mobile banners, help pages for multiple regions based on Wordpress, email templates for dozens of labels built in ExactTarget, promo pages, etc.

### **Web Developer (vibration)**

October 2014 - January 2015

My main responsibility was to create web pages based on Wordpress. I was working in a small team (other devs, content manager, designer) to deliver web pages according to client's requirements.

The company was also creating paid themes for Wordpress, so sometimes I was working as a Customer Support and was helping buyers with their requests.

### **Back-end developer - part-time (MFdesign)**

November 2011 - July 2015

I have started to work here during my time at university. My boss was managing projects and FE, and I was handling BE, databases and basically everything more technical. My first task was to create a simple CMS from scratch using PHP. Afterwards, the CMS was used as a base for web pages we have built - for every page I had to make some tweaks to the CMS based on the requirements. The web pages were mostly presentational, but we have also built a few small e-shops and a portal for everything related to weddings. We have created about two dozens of web pages.

This was like a second higher education to me - as the only BE dev, I had to figure out all by myself, whether it was database structure for a new project, an integration of payment gateway (TrustPay), automatic conversion of mp3 to ogg, protecting digital data from forbidden download, integrating Google Maps API, etc.

## EDUCATION

### **Master's degree in Applied informatics (Faculty of mathematics, physics and informatics, Comenius university Bratislava)**

September 2011 - June 2015

### **Bachelor degree in Applied informatics (Faculty of mathematics, physics and informatics, Comenius university Bratislava)**

September 2008 - June 2011
